## 1.1 Introduction

**Figure 1-1: IMBA-BDE**

The IMBA-BDE is an ATX motherboard. It has an on-board 14nm Intel® Xeon® processor D-1500 series, and supports four 288-pin 2133 MHz dual-channel DDR4 DIMM modules up to 128 GB.

The IMBA-BDE equips with two GbE interfaces through the Intel® I210-AT PCIe GbE controllers. In addition, it supports dual 10GbE LAN via the optional 10GbE LAN card. Expansion and I/O include four USB 3.0 and two USB 2.0 on the rear panel, four USB 2.0 by pin header, one USB 2.0 by internal Type A connector, six SATA 6Gb/s, four RS-232, one RS-422/485, one PCIe x4 (Gen 2) slot, five PCIe x4 (Gen 3) slots and one M.2 slot.

## IMBA-BDE ATX Motherboard

### 1.2 Model Variations

The model variations for the IMBA-BDE series are listed in **Table 1-1**.

Model	Processor
IMBA-BDE-1548	Intel® Xeon® D-1548 (up to 8 cores, 12 MB cache, TDP=45W)
IMBA-BDE-1518	Intel® Xeon® D-1518 (up to 4 cores, 6 MB cache, TDP=35 W)

**Table 1-1: Model Variations**

### 1.3 Features

Some of the IMBA-BDE motherboard features are listed below:

- ATX form factor
- On-board 14nm Intel® Xeon® processor D-1500 series
- Four 288-pin 2133 MHz dual-channel ECC unbuffered/registered DDR4 SDRAM DIMMs supported (system max. 128 GB)
- Supports dual 10GbE LAN (via optional 10GbE LAN card)
- Supports PCI Express Generation 3.0 at 8 GT/s I/O bandwidth
- Complete I/O interfaces, including four USB 3.0, seven USB 2.0, five RS-232, one RS-422/485 and six SATA 6Gb/s
- Flexible expansion options, including five PCIe x4 (Gen 3) slots, one PCIe x4 (Gen 2) slot, one M.2 (M key) slot and one 10GbE LAN card slot
- RoHS compliant

## 1.4 Connectors

The connectors on the IMBA-BDE are shown in the following figures.

### 1.7 Technical Specifications

The IMBA-BDE technical specifications are listed in **Table 1-2**.

Specifications/Model	IMBA-BDE
<b>Form Factor</b>	ATX
<b>CPU</b>	Intel® Xeon® processor D-1548 (up to 8 cores, 12 MB cache, TDP=45 W) Intel® Xeon® processor D-1518 (up to 4 cores, 6 MB cache, TDP=35 W)
<b>Memory</b>	Four 288-pin 2133 MHz dual-channel ECC unbuffered/registered DDR4 SDRAM DIMMs supported (system max. 128 GB)
<b>Ethernet</b>	<b>LAN1 &amp; LAN2:</b> Intel® I210-AT PCIe GbE controller <b>LAN3 &amp; LAN4 (optional):</b> Inphi CS4227 PHY
<b>Display Output</b>	One VGA (up to 1920x1200@60 Hz)
<b>BIOS</b>	AMI BIOS
<b>Super I/O Controller</b>	Fintek F81866D
<b>Watchdog Timer</b>	Software programmable, supports 1~255 sec. system reset
<b>Expansions</b>	One 10GbE LAN card slot 1 x M.2 slot (M key, 2242 ~ 2280, SATA and PCIe signal) One PCIe x4 slot (Gen 2) Five PCIe x4 slots (Gen 3)
<b>I/O Interfaces</b>	
<b>Digital I/O</b>	One 8-bit digital I/O
<b>Ethernet</b>	Two RJ-45 GbE ports
<b>Fan</b>	One 4-pin CPU smart fan connector One 4-pin system smart fan connector
<b>Front Panel</b>	One 14-pin header (power LED, HDD LED, speaker, power button, reset button)

<b>I<sup>2</sup>C</b>	One 4-pin wafer connector
<b>Keyboard and Mouse</b>	One PS/2 keyboard connector One PS/2 mouse connector
<b>LAN LEDs</b>	Two 2-pin headers
<b>Serial ATA</b>	Six SATA 6Gb/s connectors (support RAID 0, 1, 5, 10)
<b>Serial Ports</b>	One RS-232 (DB-9) one rear panel Four RS-232 by internal 40-pin headers One RS-422/485 by internal 4-pin wafer connector
<b>SMBus</b>	One 4-pin wafer connector
<b>TPM</b>	One 20-pin header
<b>USB 2.0</b>	One USB 2.0 port by internal Type A connector Two USB 2.0 ports on rear panel Four USB 2.0 ports via internal pin header
<b>USB 3.0</b>	Four USB 3.0 ports on rear panel
<b>Environmental and Power Specifications</b>	
<b>Power Supply</b>	ATX power supply Supports AT/ATX mode
<b>Power Consumption</b>	3.3V@0.11A, 5V@2.83A, 12V@3.97A (Intel® Xeon® D-1548 CPU with four 8 GB 2133 MHz DDR4 memory)

## 2.1 Anti-static Precautions

---

### WARNING!

Static electricity can destroy certain electronics. Make sure to follow the ESD precautions to prevent damage to the product, and injury to the user.

---

Make sure to adhere to the following guidelines:

- **Wear an anti-static wristband:** Wearing an anti-static wristband can prevent electrostatic discharge.
- **Self-grounding:** Touch a grounded conductor every few minutes to discharge any excess static buildup.
- **Use an anti-static pad:** When configuring any circuit board, place it on an anti-static mat.
- **Only handle the edges of the PCB:** Don't touch the surface of the motherboard. Hold the motherboard by the edges when handling.

## 2.2 Unpacking Precautions

When the IMBA-BDE is unpacked, please do the following:

- Follow the anti-static guidelines above.
- Make sure the packing box is facing upwards when opening.
- Make sure all the packing list items are present.

## IMBA-BDE ATX Motherboard

### 2.3 Packing List

#### NOTE:

If any of the components listed in the checklist below are missing, do not proceed with the installation. Contact the IEI reseller or vendor the IMBA-BDE was purchased from or contact an IEI sales representative directly by sending an email to [sales@ieiworld.com](mailto:sales@ieiworld.com).

The IMBA-BDE is shipped with the following components:

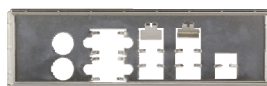

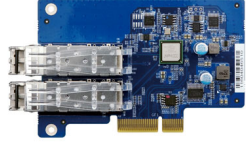

Quantity	Item and Part Number	Image
1	IMBA-BDE single board computer	
2	SATA cable	
1	I/O shielding	
1	Utility CD	
1	One Key Recovery CD	
1	Quick installation guide

## 2.4 Optional Items

The following are optional components which may be separately purchased:

Item and Part Number	Image
Dual-port 10GbE LAN card (P/N: LAN-10G2F-PHY-CS4227)	
Dual-port USB cable with bracket, 300 mm, P=2.54 (P/N: 19800-003100-100-RS)	
SATA power cable (P/N: 32102-000100-200-RS)	
RS-422/485 cable, 200 mm, P=2.00 (P/N: 32205-003800-300-RS)	
20-pin Infineon TPM module, software management tool, firmware v4.4 (P/N: TPM-IN01-R20)

### 3.1.3 External Interface Panel Connectors

The table below lists the connectors on the external I/O panel.

Connector	Type	Label
Ethernet and USB 3.0 ports	RJ-45, USB 3.0	LAN1_USB1, LAN2_USB2
Keyboard and mouse connectors	PS/2	KBMS1
RS-232 and VGA connectors	9-pin male DB-9, 15-pin female	VGACOM1
USB 2.0 connectors	USB 2.0	LAN3_USB3

### 3.2 Internal Peripheral Connectors

The section describes all of the connectors on the IMBA-BDE.

#### 3.2.1 +12V ATX Power Connector

- CN Label:** 12V\_ATX1
- CN Type:** 4-pin Molex power connector, p=4.2 mm
- CN Location:** See **Figure 3-2**
- CN Pinouts:** See **Table 3-3**

This connector provides power to the CPU.

### 3.2.2 10GbE LAN Card Slot

- CN Label:** 10G\_HOST\_CON1
- CN Type:** 10GbE LAN card slot
- CN Location:** See **Figure 3-3**

This slot is designed to install the optional 10GbE LAN card.

**Figure 3-3: 10GbE LAN Card Slot Location**

### 3.2.3 ATX Power Connector

- CN Label:** ATX1
- CN Type:** 24-pin connector, p=4.2 mm
- CN Location:** See **Figure 3-4**
- CN Pinouts:** See **Table 3-4**

The ATX power connector connects to an ATX power supply.

### 3.2.4 Battery Connector

**CAUTION:**

Risk of explosion if battery is replaced by an incorrect type. Only certified engineers should replace the on-board battery.

Dispose of used batteries according to instructions and local regulations.

- CN Label:** BT1
- CN Type:** Battery holder
- CN Location:** See **Figure 3-5**

A system battery is placed in the battery holder. The battery provides power to the system clock to retain the time when power is turned off.

### 3.2.5 BMC Debug Connector

- CN Label:** J2
- CN Type:** 4-pin header, p=2.54 mm
- CN Location:** See **Figure 3-6**
- CN Pinouts:** See **Table 3-5**

The BMC debug connector is used for debug of the BMC chip.

### 3.2.14 M.2 Slot

<b>CN Label:</b>	<b>CON9</b>
<b>CN Type:</b>	M.2 M key slot
<b>CN Location:</b>	See <b>Figure 3-15</b>

The M.2 slot is keyed in the M position and provides the mounting screw position for 2242/2260/2280-size M.2 module. The M.2 slot supports the signals of SATA and PCIe.

**Figure 3-15: M.2 Slot Location**

#### **NOTE:**

If the SATA signal of the M.2 slot (**CON9**) is being used, such as an M.2 SSD is installed to the M.2 slot, the **SATA5** connector will be disabled.

# Installation

## IMBA-BDE ATX Motherboard

### 4.1 Anti-static Precautions

---

#### WARNING:

Failure to take ESD precautions during installation may result in permanent damage to the product and severe injury to the user.

---

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the IMBA-BDE. Dry climates are especially susceptible to ESD. It is therefore critical to strictly adhere to the following anti-static precautions whenever the IMBA-BDE, or any other electrical component, is handled.

- **Wear an anti-static wristband:** - Wearing a simple anti-static wristband can help to prevent ESD from damaging the board.
- **Self-grounding:** - Before handling the board touch any grounded conducting material. During the time the board is handled, frequently touch any conducting materials that are connected to the ground.
- **Use an anti-static pad:** When configuring the IMBA-BDE, place it on an anti-static pad. This reduces the possibility of ESD damaging the IMBA-BDE.
- **Only handle the edges of the PCB:-** When handling the PCB, hold it by the edges.

### 4.2 Installation Considerations

---

#### NOTE:

The following installation notices and installation considerations should be read and understood before the IMBA-BDE is installed. All installation notices pertaining to the installation of IMBA-BDE should be strictly adhered to. Failing to adhere to these precautions may lead to severe damage of the IMBA-BDE and injury to the person installing the motherboard.

---

**WARNING:**

The installation instructions described in this manual should be carefully followed in order to prevent damage to the IMBA-BDE, IMBA-BDE components and injury to the user.

Before and during the installation please **DO** the following:

- **Read the user manual:**
  - The user manual provides a complete description of the installation instructions and configuration options.
- **Wear an electrostatic discharge cuff (ESD):**
  - Electronic components are easily damaged by ESD. Wearing an ESD cuff removes ESD from the body and helps prevent ESD damage.
- **Place on an anti-static pad:**
  - When installing or configuring the motherboard, place it on an anti-static pad. This helps to prevent potential ESD damage.
- **Turn all power off:**
  - Make sure the product is disconnected from all power supplies and that no electricity is being fed into the system.

Before and during the installation of the IMBA-BDE, **DO NOT:**

- Remove any of the stickers on the PCB board. These stickers are required for warranty validation.
- Use the product before verifying all the cables and power connectors are properly connected.
- Allow screws to come in contact with the PCB circuit, connector pins, or its components.

### 4.3 DIMM Installation

To install a DIMM, please follow the steps below and refer to **Figure 4-1**.

**Figure 4-1: DIMM Installation**

- Step 1: Open the DIMM socket handles.** Open the two handles outwards as far as they can. See **Figure 4-1**.
- Step 2: Align the DIMM with the socket.** Align the DIMM so the notch on the memory lines up with the notch on the memory socket. See **Figure 4-1**.
- Step 3: Insert the DIMM.** Once aligned, press down until the DIMM is properly seated. Clip the two handles into place. See **Figure 4-1**.
- Step 4: Removing a DIMM.** To remove a DIMM, push both handles outward. The memory module is ejected by a mechanism in the socket.

## 4.4 M.2 Module Installation

### NOTE:

If the SATA signal of the M.2 slot (**CON9**) is being used, such as an M.2 SSD is installed to the M.2 slot, the **SATA5** connector will be disabled.

The M.2 slot is keyed in the M position and provides the mounting screw position for 2242/2260/2280-size M.2 module. To install a 2280-size M.2 module, please follow the steps below.

**Step 1:** Locate the M.2 module slot. See **Chapter 3**.

**Step 2:** Remove the on-board retention screw as shown in **Figure 4-2**.

**Figure 4-2: Removing the M.2 Module Retention Screw**

## IMBA-BDE ATX Motherboard

**Step 3:** Line up the notch on the module with the notch on the slot. Slide the M.2 module into the socket at an angle of about 20° (Figure 4-3).

Figure 4-3: Inserting the M.2 Module into the Slot at an Angle

**Step 4:** Push the M.2 module down and secure it with the previously removed retention screw (Figure 4-4).

Figure 4-4: Securing the M.2 Module

To install a 2242/2260-size M.2 module, please follow the steps below.

**Step 1:** Locate the M.2 module slot. See **Chapter 3**.

**Step 2:** Remove the retention screw and standoff as shown in **Figure 4-5**.

**Figure 4-5: Removing the M.2 Module Retention Screw and Standoff**

**Step 3:** Install the previously removed standoff to the screw hole for the 2242/2260-size M.2 module (**Figure 4-6**).

**Step 4:** Follow **Step 3 ~ Step 4** on previous page to insert and secure the 2242/2260-size M.2 module.

### 4.5 System Configuration

The system configuration is controlled by buttons/jumpers/switches, and should be performed before installation.

#### 4.5.1 AT/ATX Power Mode Selection

The AT and ATX power mode selection is made through the AT/ATX power mode switch which is shown in **Figure 4-7**.

Figure 4-7: AT/ATX Power Mode Switch Location

Setting	Description
A-B	ATX power mode (default)
B-C	AT power mode

### 4.5.2 Clear CMOS Jumpers

- Jumper Label:** JP2, JP3
- Jumper Type:** 3-pin header, p=2 mm
- Jumper Settings:** See Table 4-2
- Jumper Location:** See Figure 4-8

To reset the BIOS, move the jumper of the **JP2** header to the "Clear CMOS" position for 3 seconds or more, and then move back to the default position. In addition, the **JP3** header is the secondary clear CMOS jumper that can reset the ME.

Setting	Description
Short 1-2	Normal (default)
Short 2-3	Clear CMOS

## 4.6 Internal Peripheral Device Connections

This section outlines the installation of peripheral devices to the onboard connectors.

### 4.6.1 SATA Drive Connection

The IMBA-BDE is shipped with two SATA drive cables. To connect the SATA drive to the connector, please follow the steps below.

**Step 1: Locate the connectors.** The locations of the SATA drive connectors are shown in **Chapter 3**.

**Step 2: Insert the cable connector.** Insert the cable connector into the on-board SATA drive connector until it clips into place. See **Figure 4-9**.

**Figure 4-9: SATA Drive Cable Connection**

**Step 3: Connect the cable to the SATA disk.** Connect the connector on the other end of the cable to the connector at the back of the SATA drive. See **Figure 4-10**.

**Step 4: Connect the SATA power cable.** Connect the SATA power connector to the back of the SATA drive. See **Figure 4-10**.

**Figure 4-10: SATA Power Drive Connection**

The SATA power cable can be bought from IEI. See **Optional Items** in Section 2.4.

## 4.7 Driver Installation

All the drivers for the IMBA-BDE are on the CD that came with the system. To install the drivers, please follow the steps below.

### **NOTE:**

The content of the CD may vary throughout the life cycle of the product and is subject to change without prior notice. Visit the IEI website or contact technical support for the latest updates.

**Step 1:** Insert the CD into a CD drive connected to the system.

## IMBA-BDE ATX Motherboard

---

### NOTE:

If the installation program doesn't start automatically:  
Click "Start->My Computer->CD Drive->autorun.exe"

---

**Step 2:** The driver main menu appears. Click IMBA-BDE.

**Step 3:** A new screen with a list of available drivers appears.

**Step 4:** Install all of the necessary drivers in the menu.

## IMBA-BDE ATX Motherboard

### 5.1 Introduction

The BIOS is programmed onto the BIOS chip. The BIOS setup program allows changes to certain system settings. This chapter outlines the options that can be changed.

#### NOTE:

Some of the BIOS options may vary throughout the life cycle of the product and are subject to change without prior notice.

#### 5.1.1 Starting Setup

The UEFI BIOS is activated when the computer is turned on. The setup program can be activated by pressing the **DEL** or **F2** key as soon as the system is turned on.

If the system enters the OS environment before the **DEL** or **F2** key is pressed, restart the computer and try again.

#### 5.1.2 Using Setup

Use the arrow keys to highlight items, press **ENTER** to select, use the PageUp and PageDown keys to change entries, press **F1** for help and press **ESC** to quit. Navigation keys are shown in the following table.

Key	Function
Up arrow	Move to previous item
Down arrow	Move to next item
Left arrow	Move to the item on the left hand side
Right arrow	Move to the item on the right hand side
+	Increase the numeric value or make changes
-	Decrease the numeric value or make changes
Esc key	Main Menu – Quit and not save changes into CMOS Status Page Setup Menu and Option Page Setup Menu -- Exit current page and return to Main Menu

Key	Function
F1	General help, only for Status Page Setup Menu and Option Page Setup Menu
F2	Load previous values
F3	Load optimized defaults
F4	Save changes and Exit BIOS

Table 5-1: BIOS Navigation Keys

### 5.1.3 Getting Help

When **F1** is pressed a small help window describing the appropriate keys to use and the possible selections for the highlighted item appears. To exit the Help Window press **Esc** or the **F1** key again.

### 5.1.4 Unable to Reboot after Configuration Changes

If the computer cannot boot after changes to the system configuration are made, CMOS defaults. Use the clear CMOS button described in **Section 4.5.2**.

### 5.1.5 BIOS Menu Bar

The **menu bar** on top of the BIOS screen has the following main items:

- Main – Changes the basic system configuration.
- Advanced – Changes the advanced system settings.
- IntelRCSetup– Changes the processor and PCH settings.
- Security – Sets User and Supervisor Passwords.
- Boot – Changes the system boot configuration.
- Save & Exit – Selects exit options and loads default settings.

The following sections completely describe the configuration options found in the menu items at the top of the BIOS screen and listed above.

#### BIOS Menu 1: Main

The Main menu has two user configurable fields:

➔ **System Date [xx/xx/xx]**

Use the **System Date** option to set the system date. Manually enter the day, month and year.

➔ **System Time [xx:xx:xx]**

Use the **System Time** option to set the system time. Manually enter the hours, minutes and seconds.

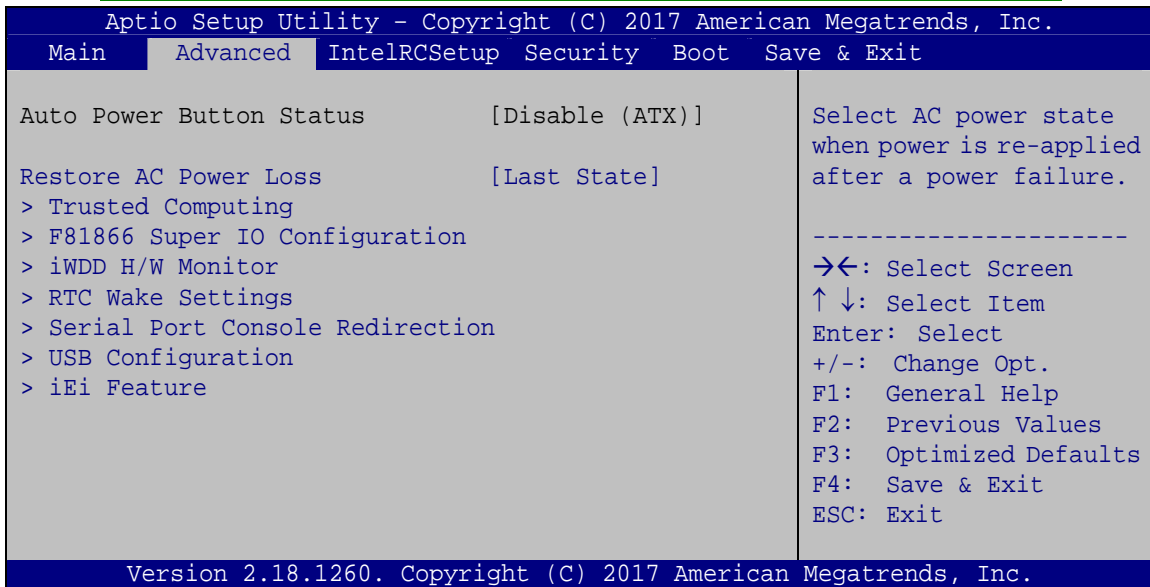

## 5.3 Advanced

Use the **Advanced** menu (**BIOS Menu 2**) to configure the peripheral devices through the following sub-menus:

### WARNING:

Setting the wrong values in the sections below may cause the system to malfunction. Make sure that the settings made are compatible with the hardware.

### BIOS Menu 2: Advanced

#### ➔ Restore AC Power Loss [Last State]

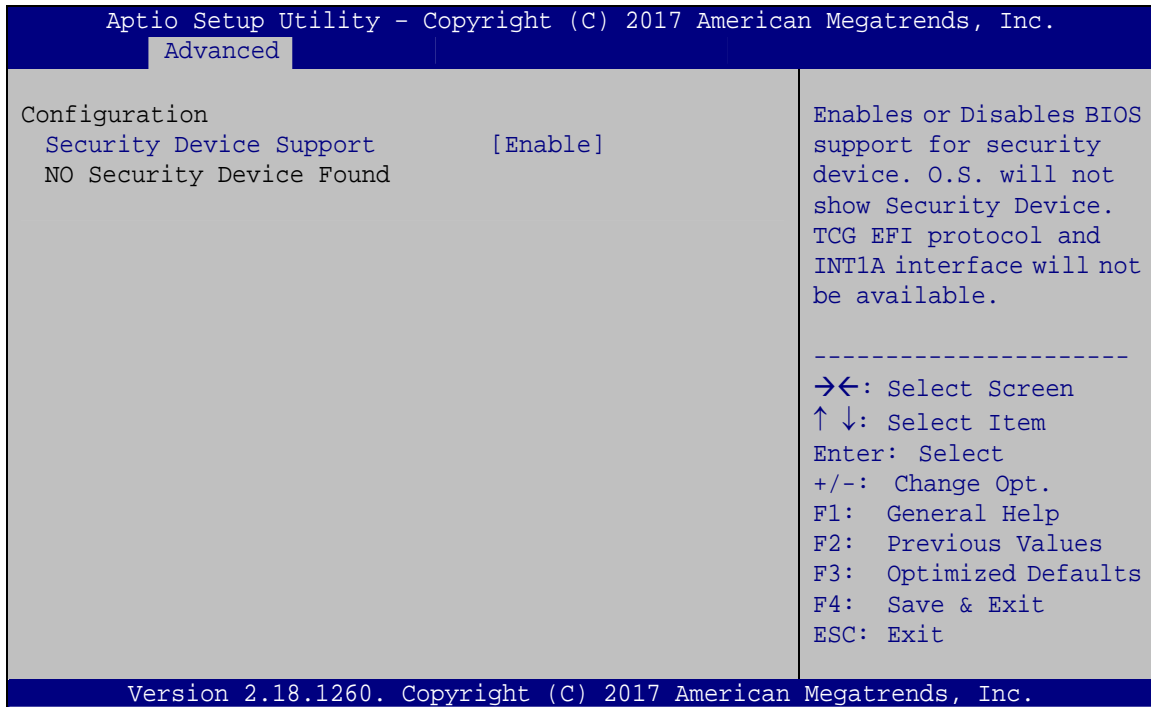

Use the **Restore AC Power Loss** BIOS option to specify what state the system returns to if there is a sudden loss of power to the system.

- ➔ **Power Off**                      The system remains turned off
- ➔ **Power On**                        The system turns on
- ➔ **Last State**    **DEFAULT**      The system returns to its previous state. If it was on, it turns itself on. If it was off, it remains off.

### 5.3.1 Trusted Computing

Use the **Trusted Computing** menu (**BIOS Menu 3**) to configure settings related to the Trusted Computing Group (TCG) Trusted Platform Module (TPM).

#### BIOS Menu 3: Trusted Computing

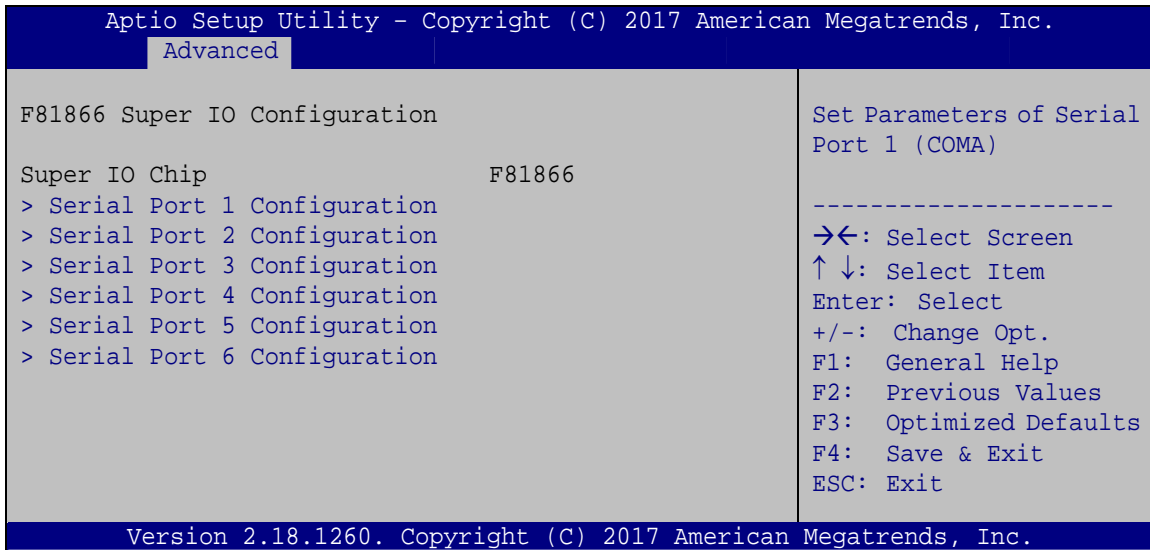

##### ➔ Security Device Support [Enable]

Use the **Security Device Support** option to configure support for the TPM.

- ➔ **Disable**    DEFAULT    TPM support is disabled.
- ➔ **Enable**                    TPM support is enabled.

### 5.3.2 F81866 Super IO Configuration

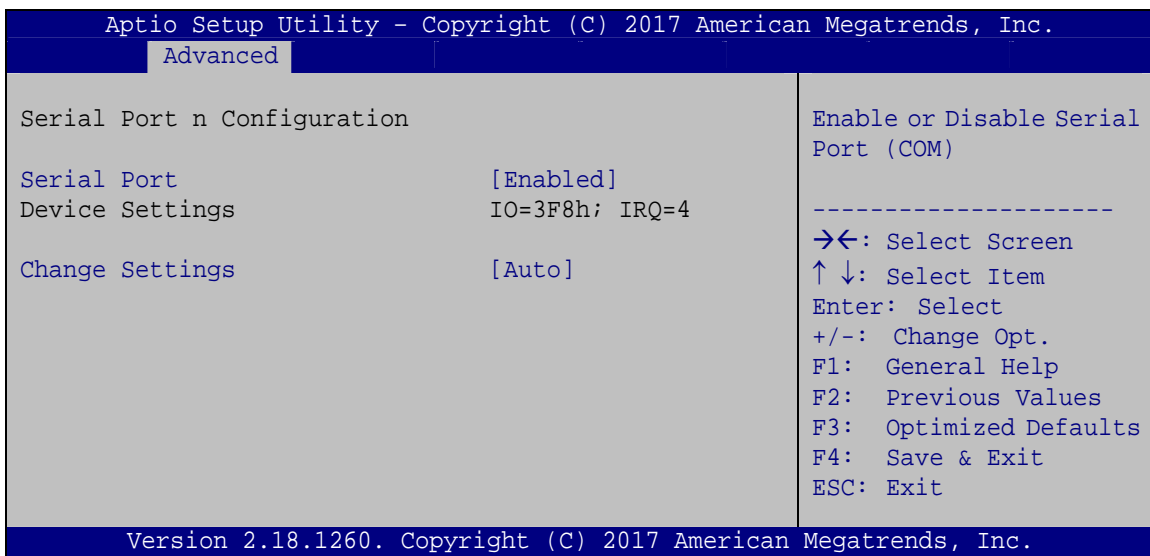

Use the **F81866 Super IO Configuration** menu (**BIOS Menu 4**) to set or change the configurations for the serial ports.

**BIOS Menu 4: F81866 Super IO Configuration**

#### 5.3.2.1 Serial Port n Configuration

Use the **Serial Port n Configuration** menu (**BIOS Menu 5**) to configure the serial port n.

**BIOS Menu 8: RTC Wake Settings**

### → Wake system with Fixed Time [Disabled]

Use the **Wake system with Fixed Time** option to enable or disable the system wake on alarm event.

→ **Disabled**      **DEFAULT**      The real time clock (RTC) cannot generate a wake event

→ **Enabled**      If selected, the **Wake up every day** option appears allowing you to enable to disable the system to wake every day at the specified time. Besides, the following options appear with values that can be selected:

Wake up every day

Wake up date

Wake up hour

Wake up minute

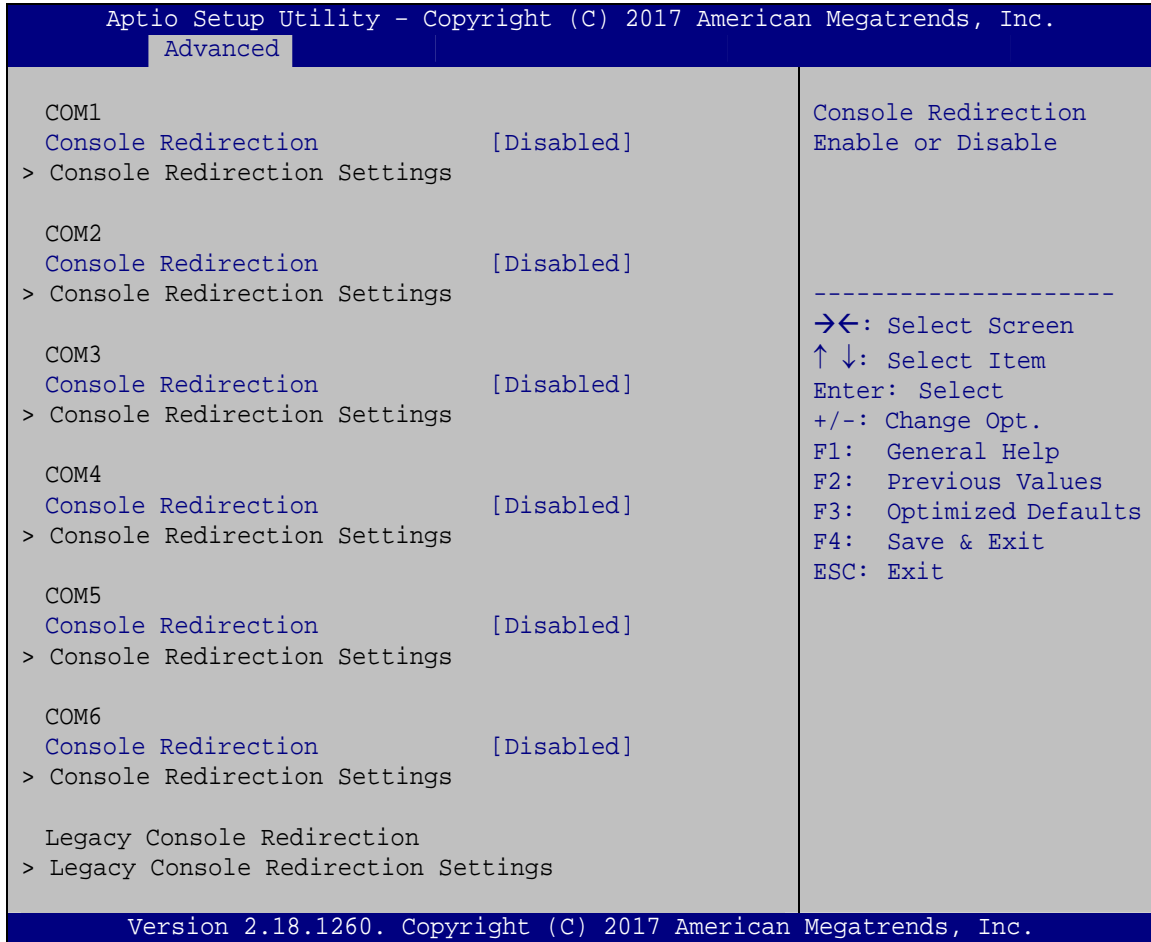

Wake up second

After setting the alarm, the computer turns itself on from a suspend state when the alarm goes off.

### 5.3.5 Serial Port Console Redirection

The **Serial Port Console Redirection** menu (**BIOS Menu 9**) allows the console redirection options to be configured. Console redirection allows users to maintain a system remotely by re-directing keyboard input and text output through the serial port.

## IMBA-BDE ATX Motherboard

### BIOS Menu 9: Serial Port Console Redirection

#### → Console Redirection [Disabled]

Use **Console Redirection** option to enable or disable the console redirection function.

- **Disabled**      **DEFAULT**      Disabled the console redirection function
- **Enabled**                      Enabled the console redirection function

#### NOTE:

The following options are available in the **Console Redirection Settings** submenu when the **Console Redirection** option is enabled.

**→ Terminal Type [ANSI]**

Use the **Terminal Type** option to specify the remote terminal type.

- **VT100**                                      The target terminal type is VT100
- **VT100+**                                    The target terminal type is VT100+
- **VT-UTF8**                                    The target terminal type is VT-UTF8
- **ANSI**                                      **DEFAULT**                                    The target terminal type is ANSI

**→ Bits per second [115200]**

Use the **Bits per second** option to specify the serial port transmission speed. The speed must match the other side. Long or noisy lines may require lower speeds.

- **9600**                                        Sets the serial port transmission speed at 9600.
- **19200**                                       Sets the serial port transmission speed at 19200.
- **38400**                                       Sets the serial port transmission speed at 38400.
- **57600**                                       Sets the serial port transmission speed at 57600.
- **115200**                                      **DEFAULT**                                    Sets the serial port transmission speed at 115200.

**→ Data Bits [8]**

Use the **Data Bits** option to specify the number of data bits.

- **7**    Sets the data bits at 7.
- **8**    **DEFAULT**                                    Sets the data bits at 8.

**→ Parity [None]**

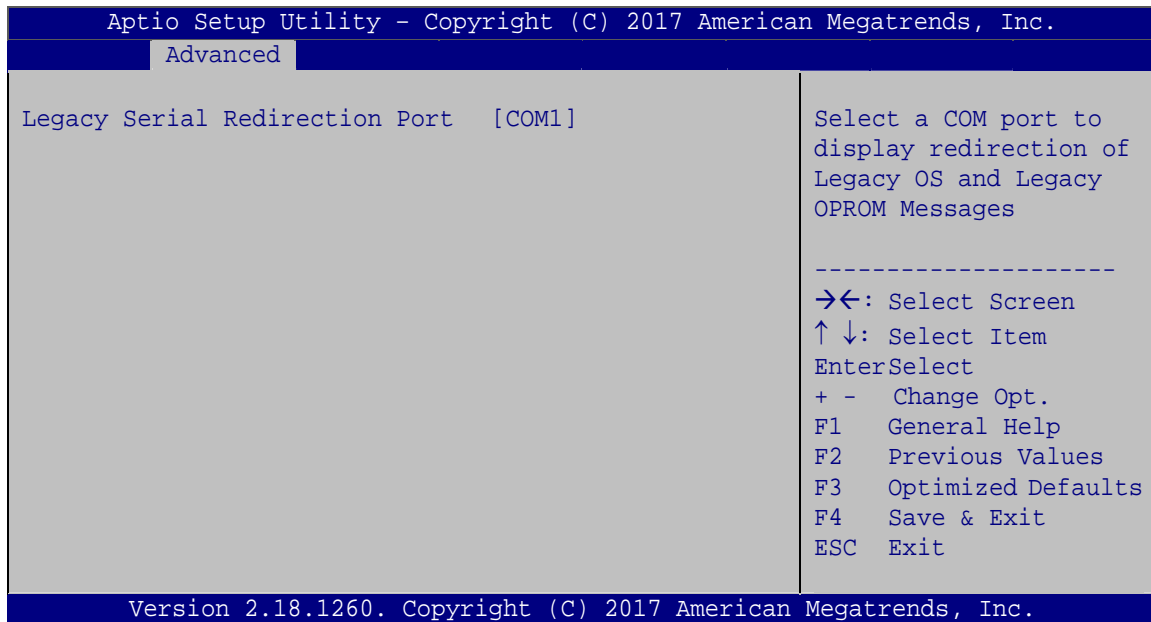

Use the **Parity** option to specify the parity bit that can be sent with the data bits for detecting the transmission errors.

- **None**                                      **DEFAULT**                                    No parity bit is sent with the data bits.
- **Even**                                        The parity bit is 0 if the number of ones in the data bits is even.

## IMBA-BDE ATX Motherboard

- ➔ **Odd**                                      The parity bit is 0 if the number of ones in the data bits is odd.
  - ➔ **Mark**                                      The parity bit is always 1. This option does not provide error detection.
  - ➔ **Space**                                      The parity bit is always 0. This option does not provide error detection.
- ➔ **Stop Bits [1]**
- Use the **Stop Bits** option to specify the number of stop bits used to indicate the end of a serial data packet. Communication with slow devices may require more than 1 stop bit.
- ➔ **1**                      **DEFAULT**                      Sets the number of stop bits at 1.
  - ➔ **2**    Sets the number of stop bits at 2.

### 5.3.5.1 Legacy Console Redirection Settings

**BIOS Menu 10: Legacy Console Redirection Settings**

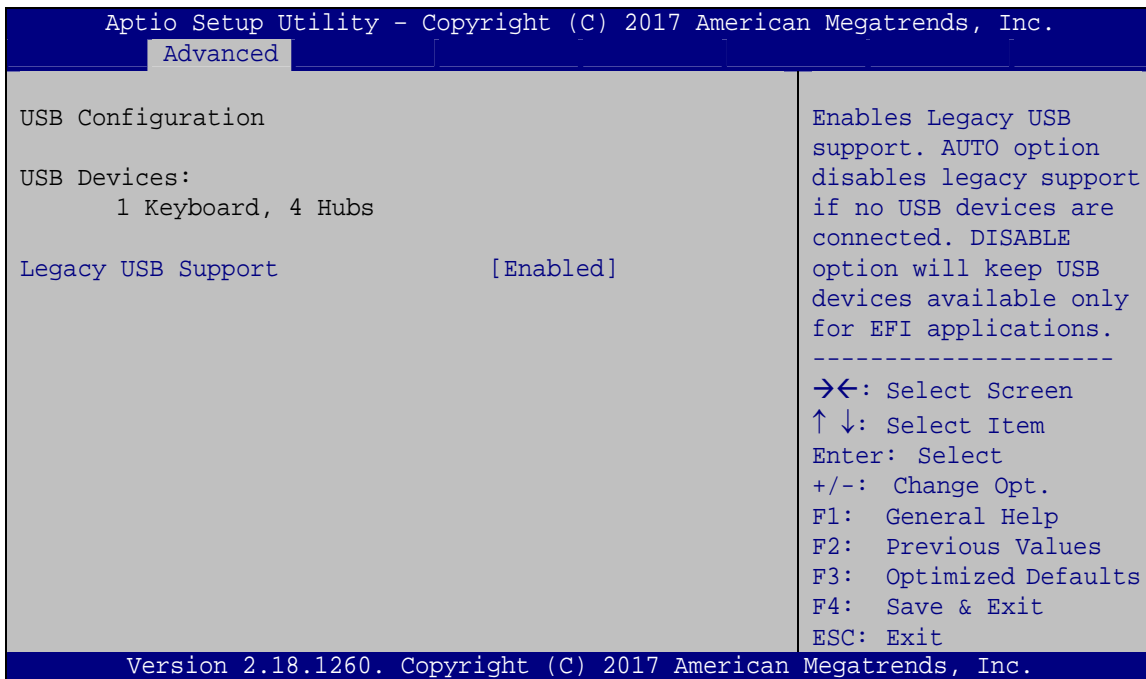

➔ **Legacy Serial Redirection Port [COM1]**

Use the **Legacy Serial Redirection Port** option to select a COM port to display redirection of legacy OS and legacy OPROM messages. Configuration options are listed below.

- COM1 **Default**
- COM2
- COM3
- COM4
- COM5
- COM6

### ➔ Legacy USB Support [Enabled]

Use the **Legacy USB Support** BIOS option to enable USB mouse and USB keyboard support. Normally if this option is not enabled, any attached USB mouse or USB keyboard does not become available until a USB compatible operating system is fully booted with all USB drivers loaded. When this option is enabled, any attached USB mouse or USB keyboard can control the system even when there is no USB driver loaded onto the system.

- ➔ **Enabled**    **DEFAULT**    Legacy USB support enabled
- ➔ **Disabled**                    Legacy USB support disabled
- ➔ **Auto**                            Legacy USB support disabled if no USB devices are connected

# Regulatory Compliance

---

### DECLARATION OF CONFORMITY

This equipment has been tested and found to comply with specifications for CE marking. If the user modifies and/or installs other devices in the equipment, the CE conformity declaration may no longer apply.

### FCC WARNING

This equipment complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

## IMBA-BDE ATX Motherboard

**CAUTION:**

Risk of explosion if battery is replaced by an incorrect type. Only certified engineers should replace the on-board battery.

Dispose of used batteries according to instructions and local regulations.

- Outside the European Union – If you wish to dispose of used electrical and electronic products outside the European Union, please contact your local authority so as to comply with the correct disposal method.
- Within the European Union – The device that produces less waste and is easier to recycle is classified as electronic device in terms of the European Directive 2012/19/EU (WEEE), and must not be disposed of as domestic garbage.

EU-wide legislation, as implemented in each Member State, requires that waste electrical and electronic products carrying the mark (left) must be disposed of separately from normal household waste. This includes monitors and electrical accessories, such as signal cables or power cords. When you need to dispose of your device, please follow the guidance of your local authority, or ask the shop where you purchased the product. The mark on electrical and electronic products only applies to the current European Union Member States.

Please follow the national guidelines for electrical and electronic product disposal.

# Terminology

---

<b>AC '97</b>	Audio Codec 97 (AC'97) refers to a codec standard developed by Intel® in 1997.
<b>ACPI</b>	Advanced Configuration and Power Interface (ACPI) is an OS-directed configuration, power management, and thermal management interface.
<b>AHCI</b>	Advanced Host Controller Interface (AHCI) is a SATA Host controller register-level interface.
<b>ATA</b>	The Advanced Technology Attachment (ATA) interface connects storage devices including hard disks and CD-ROM drives to a computer.
<b>ARMD</b>	An ATAPI Removable Media Device (ARMD) is any ATAPI device that supports removable media, besides CD and DVD drives.
<b>ASKIR</b>	Amplitude Shift Keyed Infrared (ASKIR) is a form of modulation that represents a digital signal by varying the amplitude (“volume”) of the signal. A low amplitude signal represents a binary 0, while a high amplitude signal represents a binary 1.
<b>BIOS</b>	The Basic Input/Output System (BIOS) is firmware that is first run when the computer is turned on and can be configured by the end user
<b>CODEC</b>	The Compressor-Decompressor (CODEC) encodes and decodes digital audio data on the system.
<b>CompactFlash®</b>	CompactFlash® is a solid-state storage device. CompactFlash® devices use flash memory in a standard size enclosure. Type II is thicker than Type I, but a Type II slot can support both types.
<b>CMOS</b>	Complimentary metal-oxide-conductor is an integrated circuit used in chips like static RAM and microprocessors.
<b>COM</b>	COM refers to serial ports. Serial ports offer serial communication to expansion devices. The serial port on a personal computer is usually a male DB-9 connector.
<b>DAC</b>	The Digital-to-Analog Converter (DAC) converts digital signals to analog signals.
<b>DDR</b>	Double Data Rate refers to a data bus transferring data on both the rising and falling edges of the clock signal.

## IMBA-BDE ATX Motherboard

<b>DMA</b>	Direct Memory Access (DMA) enables some peripheral devices to bypass the system processor and communicate directly with the system memory.
<b>DIMM</b>	Dual Inline Memory Modules are a type of RAM that offer a 64-bit data bus and have separate electrical contacts on each side of the module.
<b>DIO</b>	The digital inputs and digital outputs are general control signals that control the on/off circuit of external devices or TTL devices. Data can be read or written to the selected address to enable the DIO functions.
<b>EHCI</b>	The Enhanced Host Controller Interface (EHCI) specification is a register-level interface description for USB 2.0 Host Controllers.
<b>EIDE</b>	Enhanced IDE (EIDE) is a newer IDE interface standard that has data transfer rates between 4.0 MBps and 16.6 MBps.
<b>EIST</b>	Enhanced Intel® SpeedStep Technology (EIST) allows users to modify the power consumption levels and processor performance through application software. The application software changes the bus-to-core frequency ratio and the processor core voltage.
<b>FSB</b>	The Front Side Bus (FSB) is the bi-directional communication channel between the processor and the Northbridge chipset.
<b>GbE</b>	Gigabit Ethernet (GbE) is an Ethernet version that transfers data at 1.0 Gbps and complies with the IEEE 802.3-2005 standard.
<b>GPIO</b>	General purpose input
<b>HDD</b>	Hard disk drive (HDD) is a type of magnetic, non-volatile computer storage device that stores digitally encoded data.
<b>ICH</b>	The Input/Output Control Hub (ICH) is an Intel® Southbridge chipset.
<b>IrDA</b>	Infrared Data Association (IrDA) specify infrared data transmission protocols used to enable electronic devices to wirelessly communicate with each other.
<b>L1 Cache</b>	The Level 1 Cache (L1 Cache) is a small memory cache built into the system processor.
<b>L2 Cache</b>	The Level 2 Cache (L2 Cache) is an external processor memory cache.

<b>LCD</b>	Liquid crystal display (LCD) is a flat, low-power display device that consists of two polarizing plates with a liquid crystal panel in between.
<b>LVDS</b>	Low-voltage differential signaling (LVDS) is a dual-wire, high-speed differential electrical signaling system commonly used to connect LCD displays to a computer.
<b>POST</b>	The Power-on Self Test (POST) is the pre-boot actions the system performs when the system is turned-on.
<b>RAM</b>	Random Access Memory (RAM) is volatile memory that loses data when power is lost. RAM has very fast data transfer rates compared to other storage like hard drives.
<b>SATA</b>	Serial ATA (SATA) is a serial communications bus designed for data transfers between storage devices and the computer chipsets.
<b>S.M.A.R.T</b>	Self Monitoring Analysis and Reporting Technology (S.M.A.R.T) refers to automatic status checking technology implemented on hard disk drives.
<b>UART</b>	Universal Asynchronous Receiver-transmitter (UART) is responsible for asynchronous communications on the system and manages the system's serial communication (COM) ports.
<b>UHCI</b>	The Universal Host Controller Interface (UHCI) specification is a register-level interface description for USB 1.1 Host Controllers.
<b>USB</b>	The Universal Serial Bus (USB) is an external bus standard for interfacing devices. USB 1.1 supports 12Mbps data transfer rates and USB 2.0 supports 480Mbps data transfer rates.
<b>VGA</b>	The Video Graphics Array (VGA) is a graphics display system developed by IBM.

# Digital I/O Interface

---

## E.1 Introduction

The DIO connector on the IMBA-BDE is interfaced to GPIO ports on the Super I/O chipset. The digital inputs and digital outputs are generally control signals that control the on/off circuit of external devices or TTL devices. Data can be read or written to the selected address to enable the DIO functions.

**NOTE:**

For further information, please refer to the datasheet for the Super I/O chipset.

The BIOS interrupt call **INT 15H** controls the digital I/O.

**INT 15H:**

<b>AH – 6FH</b>	
<u>Sub-function:</u>	
<b>AL – 8</b>	: Set the digital port as INPUT
<b>AL</b>	: Digital I/O input value

# Hazardous Materials Disclosure

---

## IMBA-BDE ATX Motherboard

The details provided in this appendix are to ensure that the product is compliant with the Peoples Republic of China (China) RoHS standards. The table below acknowledges the presences of small quantities of certain materials in the product, and is applicable to China RoHS only.

A label will be placed on each product to indicate the estimated “Environmentally Friendly Use Period” (EFUP). This is an estimate of the number of years that these substances would “not leak out or undergo abrupt change.” This product may contain replaceable sub-assemblies/components which have a shorter EFUP such as batteries and lamps. These components will be separately marked.

Please refer to below table.

Part Name	Toxic or Hazardous Substances and Elements					
	Lead (Pb)	Mercury (Hg)	Cadmium (Cd)	Hexavalent Chromium (CR(VI))	Polybrominated Biphenyls (PBB)	Polybrominated Diphenyl Ethers (PBDE)

O: This toxic or hazardous substance is contained in all of the homogeneous materials for the part is below the limit requirement in SJ/T11363-2006 (now replaced by GB/T 26572-2011).

X: This toxic or hazardous substance is contained in at least one of the homogeneous materials for this part is above the limit requirement in SJ/T11363-2006 (now replaced by GB/T 26572-2011).

此附件旨在确保本产品符合中国 RoHS 标准。以下表格标示此产品中某有毒物质的含量符合中国 RoHS 标准规定的限量要求。

本产品上会附有“环境友好使用期限”的标签，此期限是估算这些物质“不会有泄漏或突变”的年限。本产品可能包含有较短的环境友好使用期限的可替换元件，像是电池或灯管，这些元件将会单独标示出来。
